FLUIDVISION™ Sight Flow Indicators and Sight Windows

One of the industry's most complete lines, including ANSI, Teflon/ Tefzel lined, FM approved dual-window, armored, full-view, threaded window, and low-flow gaseous models. All popular sizes and materials of construction available, with flanged, threaded and special connections, as well as rotator, flapper, drip-tube or plain indicator styles. Also includes threaded, oblong, and conventional sight windows.

MULTIVIEW™ Magnetic Liquid Level Meters

MULTIVIEW™ combines superior level indication, measurement and control in one simple, economical unit. Its performance can't be matched by ordinary floats, displacers or level indicators. Highly visible flag or follower-style chromate indicators are available, along with FM approved, CSA certified point-level switches and continuous level transmitters. Accessories include frost-free extensions, explosion-proof illuminators, insulation blankets, thermal tracing, and sanitary connections and finish.

Liquid Level Gage & Valve Sets

For direct visual indication of process level, a broad range of flat-glass transparent or reflex gages are available to meet most temperature/ pressure conditions. Tubular styles are also available, along with a complete line of both straight and offset pattern valves. Only Penberthy offers PENGAGE™ Selection Software for fast, accurate and simple gage/valve specification.

Jet Products

The world's leading line of eductor/ejector products perform everything from pumping liquids and slurries, moving granular solids, draining sumps and evacuating vessels... to heating liquids or agitating/mixing them in tanks... to mixing a second liquid into a flowing pipeline. In every case, Penberthy Jet products are doing the job better and more reliably than more complex—and costly—conventional pumping and mixing systems.

Washdown Stations

Low maintenance, compact steam/cold water mixing system delivers hot water on demand for clean-up. Model WD2000D efficiently introduces detergent to the discharge flow.
